## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a cable tie, classified in class 24, subclass 16pb.
- II. Claims 10-17, drawn to a method of forming a cable tie, classified in class 264, subclass 163.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the article can be made by a different method such as machining the cable tie from a block of material or forming a single centered thickened portion of thickness  $T_3$  greater than the thickness of the neck region at its sides that would have thickness  $T_2$ .

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Robert A. McCann on February 19, 2002 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-9. Affirmation of this election must be made by applicant in replying to this Office action. Claims 10-17 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The terms "upper side" (claim 6, line 2) and "lower side" (claim 5, line 2) are not defined relative to any structure on the cable tie so as to distinguish between them. If the tie is extending horizontally and then turned over, the side that was up would then be down. It is unclear which side is "upper" and which side is "lower".

***Claim Rejections - 35 USC § 102***

Art Unit: 3626

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Rohaly (US 5669111).

Rohaly (figures 1-5) teaches cable tie structure with a neck section that has a width that transitions from the width of the strap to the width of the cable tie head as shown in figure 3. The strap accepting channel 28 is substantially perpendicular to the intermediate section of the strap 12. The neck section has a reduced thickness at the gusset 26 that is thinner than the intermediate section of the strap 12 as shown in figure 4. The thickened side portions 24 increase the cross-sectional area of the neck so that it is greater than the intermediate section of the strap as shown in figures 3-5. As to claim 4, the gusset 26 is considered to be a channel with a circular perimeter. In regard to claims 5 and 6, turning the strap over would place the channel 26 on either the upper or lower side.

#### ***Allowable Subject Matter***

Claims 2 and 7-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Conclusion***
